Plenaries

Quotes from attendees:

Getting the knowledge about the advancements in technology for treatment of Type 1 Diabetes shows that future ahead is indeed bright as we are moving towards cure and not just advanced treatment. This experience was particularly important for me as I live with T1D.

I appreciated the practical, case-based sessions that offered real-world insights into diabetes management. The updates on new treatment guidelines and technologies were especially useful, and the opportunity to exchange ideas with peers was valuable. Overall, the content was relevant and directly applicable to my daily practice.

I believe this was one of the best conferences I have attended in over 3 decades. The presenters and topics were all relevant to my practice and the speakers were very well prepared. The presentations were delivered as a discussion and very well received by the participants."

I really enjoyed the conference! The most valuable aspects for me were the discussions on new treatment methods for Type 1 and Type 2 diabetes, as well as the focus on personalized approaches in endocrinology. The speakers were highly knowledgeable, and the sessions provided insightful, evidence-based information.
